**Figure 1** *Persons Not in the Labour Force and Employment Rates Northwest Territories, 2011-2013*

While most of the key characteristics experienced an employment rate decline, those of 15-24 experienced the largest decrease. Compared to the last month, the employment rate for youth decreased by 3.0 percentage points, likely due to the decrease in seasonal employment. The only increase between September and October was in Yellowknife, where the employment rate rose slightly by 0.2 percentage points (Table 2).

Table 3 shows that between October and September, 400 fewer people were employed, and many of them were full-time public employees. Over the last year, 500 fewer people were employed, partly due to a shift away from public employment into self-employment. Between October 2012 and October 2013, public employment decreased by 800 people, whereas self-employment increased by 400.
